Interventional Heart Wall Motion Analysis with Cardiac C-arm CT Systems. 4. 2.3. 2-D Bloodpool Segmentation. For the heart phase identification and the generation of the dynamic surface model, the 2-D segmented bloodpool of the LV is required. The bloodpool segmentation is based on a boundary defined by a set of connected points. For each of ...

A method for performing population-based cardiac motion analysis methods by considering spatio-temporally aligned Polyane motion parameters and performing decomposition of these for a group of subjects was recently proposed in [4]. The method involves a cardiac motion tracking step that takes a dense

motion is a sensitive indicator of heart diseases such as ischemia and infarction. Usually infarcted myocardium and the myocardium adjacent to ischemia display abnormal motion pattern and smaller systolic strain. The motion and strain analysis can also contribute in the research on the development of some cardiac diseases, such as hypertrophy.
