where  $i = (x_{i1}, x_{i2}, \dots, x_{in})$  and  $j = (x_{j1}, x_{j2}, \dots, x_{jn})$  are two  $n$ -dimensional data objects. For example, the Euclidean distance between the two data objects  $A(1, 2)$  and  $B(5, 3)$  is 4.12.. DBSCAN algorithm uses only one distance parameter  $Eps$  to measure similarity of spatial data with one dimension. In order to support two dimensional spatial data, we propose two distance metrics ...

defined points. The following table provides an example of the limiting vertical RMS for Class 1 at the most widely used contour intervals:

## Mapping Matters Your Questions Answered The laymanâ€™s

A geographic information system (GIS) is a system designed to capture, store, manipulate, analyze, manage, and present spatial or geographic data. GIS applications are tools that allow users to create interactive queries (user-created searches), analyze spatial information, edit data in maps, and present the results of all these operations.
