concrete for underground structures pdf

The protection of an underground structure can be performed using a positive side (exterior) or negative (interior) waterproofing system. In general, the preferred system is a positive side waterproofing system that protects the structure from all types of attack while providing a tight waterproof membrane.

Guidelines for Waterproofing of Underground Structures

Concrete is a widely used construction material for bridges, buildings and platforms as well as for underground structures such as tunnels or reinforced concrete pipelines. In general, reinforced concrete is a very durable material capable of withstanding a large range of severe environments including marine, industrial and alpine conditions.

Steel Fibre Reinforced Concrete for Underground Structures

Precast concrete is ideally suited for all types of utility structure applications including electrical, gas, industrial, telecommunications, renewable- energy structures, and water and wastewater structures. A properly manufactured and installed precast concrete structure can last almost indefinitely.

Precast concrete can resist massive impacts, so it makes an ideal material for security around public structures. Whether in day-to-day use as a median barrier or for protecting the perimeter of a building, precast structures can be designed to absorb the impact from vehicles, redirect them and/or slow them down.
