Polymer-layered silicate nanocomposites: preparation, properties and uses of a new class of materials

### **Polymer-layered silicate nanocomposites: preparation**

ABSTRACT. Nanocomposites, a high performance material exhibit unusual property combinations and unique design possibilities. With an estimated annual growth rate of about 25% and fastest demand to be in engineering plastics and elastomers, their potential is so striking that they are useful in several areas ranging from packaging to biomedical applications.

### **Nanocomposites: synthesis, structure, properties and new**

Introduction. Today, polymers and materials used for food packaging consist of a variety of petrochemical-based polymers, metals, glass, paper, and board, or combinations hereof.

### **Cellulose-Based Bio- and Nanocomposites: A Review**

1.. Introduction In the past decade, researchers' interest has been widely attracted by the possibility to prepare hybrids and nanocomposites starting from inorganic cage molecules constituted by a silicon-oxygen based framework.

### **Polypropylene-polyhedral oligomeric silsesquioxanes (POSS)**

This 3-volume set summarizes current research activities into the fundamental properties of doped nanomaterials and their applications in the fields of electronics, photonics, optics, homeland security and medical sciences.

ABOUT THIS JOURNAL Welcome to the home page of Reviews of Adhesion and Adhesives (RAA) committed to publishing peer-reviewed and thought-provoking critical reviews written by subject matter experts covering all aspects of adhesion science and adhesive technology. Our aim is to publish your work efficiently and effectively as possible so the world is aware of it.

Polymer light-emitting diodes (PLED, P-OLED), also light-emitting polymers (LEP), involve an electroluminescent conductive polymer that emits light when connected to an external voltage. They are used as a thin film for full-spectrum colour displays. Polymer OLEDs are quite efficient and require a relatively small amount of power for the amount of light produced.

The lithium iron phosphate (LiFePO<sub>4</sub>) battery, also called LFP battery (with "LFP" standing for "lithium ferrophosphate"), is a type of rechargeable battery, specifically a lithium-ion battery, which uses LiFePO<sub>4</sub> as a cathode material, and a graphitic carbon electrode with a metallic current collector grid as the anode. The specific capacity of LiFePO<sub>4</sub> is higher than that of the related ...
