following ideas: 1. Objectives-focus: stress on explicit, singular, statements of project and policy objectives. 2. Means-ends focus: organization of these objectives into a hierarchical (and typically

Gasper LOGICAL FRAMEWORKS PROBLEMS AND POTENTIALS

Non-negative matrix factorization (NMF or NNMF), also non-negative matrix approximation is a group of algorithms in multivariate analysis and linear algebra where a matrix V is factorized into (usually) two matrices W and H , with the property that all three matrices have no negative elements. This non-negativity makes the resulting matrices easier to inspect

Analyzing Qualitative Data: With or without software

The g factor (also known as general intelligence, general mental ability or general intelligence factor) is a construct developed in psychometric investigations of cognitive abilities and human intelligence. It is a variable that summarizes positive correlations among different cognitive tasks, reflecting the fact that an individual's performance on one type of cognitive task tends to be ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
