Drug design, often referred to as rational drug design or simply rational design, is the inventive process of finding new medications based on the knowledge of a biological target. The drug is most commonly an organic small molecule that activates or inhibits the function of a biomolecule such as a protein, which in turn results in a therapeutic benefit to the patient.

- We will start with the mother of all financial statements, the balance sheet. The balance sheet embodies the accounting equation, one of the greatest inventions of the human mind, invented in Italy over 500 years ago. A listing of things we own, assets, is easy. Anybody can list assets. But the insight from the accounting equation is to then also list where did we get the ...

In the field of molecular modeling, docking is a method which predicts the preferred orientation of one molecule to a second when bound to each other to form a stable complex. Knowledge of the preferred orientation in turn may be used to predict the strength of association or binding affinity between two

molecules using, for example, scoring functions.

Abstract. Psychrophiles thriving permanently at near-zero temperatures synthesize cold-active enzymes to sustain their cell cycle. Genome sequences, proteomic, and transcriptomic studies suggest various adaptive features to maintain adequate translation and proper protein folding under cold conditions.

The Darcy-Weisbach equation provides a much better approximation of friction loss by comparison with the Hazen-Williams equation as it considers Reynolds number and pipe roughness for different pipe materials and is valid across all pipe sizes and turbulent flow ranges.

As briefly expressed above, there is a lack of operational specificity to the various static "guidelines". But as those participating in many sports would probably argue, it takes experience to learn what subtle experiential meaning is associated with attitudes appropriate to any "code words" about improved performance.
