Test-driven development (TDD) is a software development process that relies on the repetition of a very short development cycle: requirements are turned into very specific test cases, then the software is improved to pass the new tests, only. This is opposed to software development that allows software to be added that is not proven to meet requirements.

Keyword-driven testing, also known as table-driven testing or action word based testing, is a software testing methodology suitable for both manual and automated testing. This method separates the documentation of test cases -including the data to use- from the prescription of the way the test cases are executed.
