Neuropsychology is the study of the structure and function of the brain as they relate to specific psychological processes and behaviours. It is both an experimental and clinical field of psychology that aims to understand how behavior and cognition are influenced by brain functioning and is concerned with the diagnosis and treatment of behavioral and cognitive effects of neurological disorders.

Obsessive-compulsive disorder (OCD) is a mental disorder where people feel the need to check things repeatedly, perform certain routines repeatedly (called "rituals"), or have certain thoughts repeatedly (called "obsessions"). People are unable to control either the thoughts or the activities for more than a short period of time. Common activities include hand washing, counting of things ...

Revised, updated, and expanded since first introduced in 2007, The Johns Hopkins Atlas of Digital EEG uses a live electroencephalogram reader, interactive computer programs, video, and traditional text to teach digital EEG reading. Technological advances have largely rendered traditional paper EEG reading systems obsolete.

Schizophrenia is a mental disorder characterized by abnormal behavior, strange speech, and a decreased ability to understand reality. Other symptoms include false beliefs, unclear or confused thinking, hearing voices that others do not, reduced social engagement and emotional expression, and lack of motivation. People with schizophrenia often have additional mental health problems such as ...
